

## News

### **We've reached 100,000 Charging Points Worldwide!**

**Since February 2017 at Digital Charging Solutions, we started to offer full service white label charging solutions for the simple, and easy use of public charging stations for automobile manufacturers and fleet operators. We now offer electric vehicle drivers access to more than 100,000 charging points, provided by more than 290 partners worldwide. We're one of the fastest growing public charging networks and intensively driving the change to a customer-oriented, nationwide electric mobility.**

We're working continuously to innovate, improve and develop public charging solutions for automobile manufacturers and fleet operators. Our white label public charging solutions provide access to a wide variety of charge point operators (CPO's) and enable electric vehicle drivers to find, use and pay for public charging stations worldwide.

Thanks to a globally growing network of partnerships, our charging network has now grown to more than 100,000 charging points! Another milestone on the road to borderless, nationwide electric mobility.

**About Digital Charging Solutions GmbH**

Digital Charging Solutions GmbH (DCS) develops public charging solutions for automobile manufacturers and fleet operators, making it one of the world's most important drivers of the transition to electromobility. The full-service white label solutions of the Munich-based company allow OEMs and fleet operators to realize their electromobility strategies, because with integrated digital solutions, DCS makes charging at public charging stations easy, safe and comfortable. In the process, with over 100,000 charging points in 25 integrated markets, as well as transnational charging, Digital Charging Solutions boasts the world's fastest-growing public charging network. In February 2017, DCS originated from BMW's ChargeNow project which was started in 2012. Digital Charging Solutions GmbH is equally owned by the BMW Group and Daimler AG.
