Market entry in Portugal: Digital Charging Solutions expands charging network

Digital Charging Solutions GmbH (DCS) now cooperates with the Mobi.E charging station network and allows customers of its partner automobile manufacturers standardized and convenient charging in Portugal. DCS provides access to more than 120,000 charging points in 28 markets and is thus intensively driving the transition to global electric mobility.

Digital Charging Solutions GmbH develops charging solutions for automobile manufacturers (OEMs) and fleet operators and allows them to realize their e-mobility strategies. The company has made it their task to intensively push forward the change to customer-oriented and comprehensive electric mobility with the development of customized charging solutions for automobile manufacturers and fleet operators. Through the cooperation with the Mobi.E network, DCS continues to expand its charging network: customers from cooperating OEMs now have access to more than 500 charging stations in Portugal, which they can conveniently use with just one charging card thanks to national and international roaming solutions. Mobi.E is a network that combines Portuguese charging station operators (CPOs) under one roof and is already represented in more than 50 communes of the southern European country.

About Digital Charging Solutions GmbH

Digital Charging Solutions GmbH (DCS) develops charging solutions for automobile manufacturers and fleet operators, making it one of the world's most important drivers of the transition to electromobility. The full-service white label solutions of the company allow OEMs and fleet operators to realize their electromobility strategies, because with integrated digital solutions, DCS makes charging at charging stations easy, safe and comfortable. In the process, with over 120,000 charging points in 28 integrated markets, as well as transnational charging, Digital Charging Solutions boasts the world's fastest-growing public charging network. In February 2017, DCS originated from BMW's ChargeNow project which was started in 2012. Since the beginning of 2019, Digital Charging Solutions GmbH has been part of the mobility joint venture of the BMW Group and Daimler AG, which has made it its mission to strengthen sustainable mobility worldwide.
